

Incremental search ("typeahead")

Show search results for user (drop-down list) as user enters a search term. Result list changes as user types more characters.

Definition according to [Wikipedia \(en\)](#):

In computing, incremental search, incremental find or real-time suggestions is a user interface interaction method to progressively search for and filter through text. As the user types text, one or more possible matches for the text are found and immediately presented to the user. This immediate feedback often allows the user to stop short of typing the entire word or phrase they were looking for. The user may also choose a closely related option from the presented list.
